# United States Patent [19]

Simpson et al.

[11] Patent Number: 6,021,115

[45] Date of Patent: Feb. 1, 2000

## [54] ATM SWITCH FLOW CONTROL

[75] Inventors: Robert Simpson, Redland; Neil Richards, Cheddar; Peter Thompson, Newport, all of United Kingdom; Pascal Moniot, Bernin, France; Marcello Coppola, Trapani, Italy; Pierre Dumas, Sevres, France; Thierry Grenot, Clamart, France; David Mouen Makoua, Nanterre, France

[73] Assignee: SGS-Thomson Microelectronics Limited, Almondsbury Bristol, United Kingdom

[21] Appl. No.: 08/919,827

[22] Filed: Aug. 28, 1997

## [30] Foreign Application Priority Data

## [57] ABSTRACT

A network of ATM routing switches transmits digital signal cells of a first type requiring integrity of transmission and a second type accepting some loss in transmission, each switch has buffer circuitry, a plurality of output ports each having a plurality of queues of cells awaiting output, each output port having control circuitry to provide in an output frame control bits indicating the type of cell, a path identifier and the existence of flow congestion at the routing switch which it outputting the frame, thereby inhibiting transmission of further frames to that location until a frame is received from that location indicating that the congestion is cleared.

17 Claims, 16 Drawing Sheets

designation only to an input port of a connected switch having a compatible designation.

## Claims Text - CLTX (7)

7. A network according to claim 1 in which each switch includes designation circuitry to provide a respective designation to each input port which is used to determine permitted paths to avoid deadlock in the network, each cell which is input having the designation of the respective input port, said control circuitry being responsive to said designations to output to a connected input of a further switch in the network only cells of a designation compatible with the designation of said connected input.

## Claims Text - CLTX (16)

16. A method according to claim 9 including providing a respective designation to each input port on each switch, which designation is used to determine permitted paths to avoid deadlock in the network, each input having the designation of the respective input port, and operating said control circuitry to output a cell of any given designation only to an input port of a connected switch having a compatible designation.
